Tomás Varela

Fullstack Developer

San Miguel de Tucumán, Argentina | tomas.varelaa19@gmail.com | www.linkedin.com/in/tomasvarela7/ | github.com/tomas-varela21

PROFESSIONAL SUMMARY

Fullstack Developer with a strong background in programming and systems engineering. Experienced in developing modern web applications with solid command of the JavaScript stack, relational and non-relational databases, and agile methodologies. Passionate about continuous improvement, code quality, and creating user-centered digital solutions.

Contribute as a fullstack developer to impactful products, creating scalable and maintainable systems with focus on user experience and delivery quality. Open to full-time roles and freelance projects.

TECHNICAL SKILLS

JavaScript, HTML5, CSS3, C#, SQL, Python, MySQL, SQL Server, MongoDB, Firebase Firestore, React, Next.js, Node.js, Express, Tailwind CSS, .NET, Git, GitHub, Firebase, Visual Studio Code, Visual Studio, REST Client (Postman/Thunder), Scrum, UML

EXPERIENCE & PROJECTS

FitProApp – SaaS Platform for Personal Trainers

Fullstack

FitProApp is a multi-role SaaS platform for personal trainers and their clients that centralizes the operations of a fitness business: students, invitations, plans, subscriptions, installments and payments, routines, exercises, and workout tracking, with dedicated trainer and student views across web and mobile. Modular backend built with Express and TypeScript on Prisma over PostgreSQL, JWT authentication with role-based access control, and a React frontend using Vite, TailwindCSS, Shadcn UI, Zustand, and React Query.

Impact: Digitizes the trainer's entire operation: a dashboard with metrics and expiration alerts, a routine builder with sets, RPE, and suggested weight, a student portal to log workouts and track progress, and automated emails and push notifications for payment reminders. It also includes a Telegram-based assistant with function calling to query data and execute system actions with confirmation.

Technologies: React, TypeScript, Vite, Tailwind CSS, Shadcn UI, Zustand, React Query, Express.js, Prisma, PostgreSQL, JWT, Zod, Expo, React Native, Telegram Bot API, Google GenAI

ConsorcioApp – Multi-building Operations Suite

Fullstack · ConsorcioApp

Web platform for property managers that centralizes building onboarding, unit assignments, settlement generation, payment tracking, and concise reports showing open debt, delinquency, and recent activity.

Impact: Automates expense calculations, late fees, and early-payment discounts, produces PDF receipts, and keeps a clear statement of account so managers can act faster when units fall behind.

Technologies: Next.js 16, React 19, TypeScript, Tailwind CSS, Prisma 5, PDFKit, react-hot-toast

Management System – Alenort

Fullstack · Alenort

Web platform to automate sales, inventory, and administrative processes. Authentication, role control, order management and traceability.

Impact: Reduced administrative time and improved order traceability between areas.

Technologies: Next.js, Tailwind CSS, Firebase Auth, Firestore, Cloud Functions, Git

FitApp – Virtual Fitness and Nutrition Assistant

Fullstack

App with chatbot for personalized workout and nutrition plans, progress tracking, and Google authentication. Profiles, routine generation and analytics.

Impact: Enhanced personalization of fitness routines and automated user data tracking.

Technologies: React, Node.js, Express, MySQL, Sequelize, OAuth

Landing Page – Oliva.Tuc

Frontend · Oliva.Tuc

Modern and responsive landing page for an olive oil business. Includes catalog with expandable and editable cart, WhatsApp redirection for order completion, image gallery, and informational sections.

Impact: Boosted the business's digital presence, streamlined customer interaction, and facilitated online order management.

Technologies: Next.js, Tailwind CSS, TypeScript, Git

ReporteApp – Multi-Company Accounting System

Fullstack · Grupo corporativo (construcción e inmobiliario)

ReporteApp is a multi-company accounting management system for a construction and real estate corporate group operating five companies simultaneously. It centralizes accounting data ingestion, validation, and reconciliation through a decoupled client-server Python REST API, incremental General Ledger calculation per company and period, and real-time synchronization with external project and budget databases.

Impact: Eliminated manual reconciliation between systems: validates journal entries and flags unbalanced entries, invalid accounts, and missing cost centers before loading data, and automatically refreshes executive Power BI dashboards. The API exposes 44 endpoints documented in Swagger on top of PostgreSQL, with a configurable validator and per-sync logging.

Technologies: Python, FastAPI, PostgreSQL (Neon), Streamlit, Power BI API, GitHub Actions, Render

ChapulinaApp – Stock Management Web App

Fullstack · Chapulina

Web app for a fashion boutique that centralizes inventory by size, sales tracking, and the digital catalog. Provides role-based login, product management with filters, low-stock alerts, and configurable price markups.

Impact: Digitized stock and pricing oversight, removing manual spreadsheets and enabling minute-level price updates aligned with business rules.

Technologies: React, Vite, Tailwind CSS, Node.js, Express, MongoDB, JWT, Axios

EDUCATION

Information Systems Engineering
UTN FRT – San Miguel de Tucumán — In progress

Technical Degree in Programming
UTN FRT – San Miguel de Tucumán — Graduated

COURSES & TRAINING

Python Course – Scientific Computing — freeCodeCamp
Building AI Agents for beginners — Microsoft Learn
Introduction to Microsoft Power Platform — Microsoft Learn

LANGUAGES

Spanish: Native
English: Upper Intermediate – B2

SOFT SKILLS

Strong problem-solving skills, Effective communication with both technical and non-technical stakeholders, Collaborative teamwork in agile environments, Adaptability and continuous learning, Attention to detail and user experience focus, Efficient time and priority management
